

Nano Technology versus Pico Technology

Nano Technology is known and accepted by scientists and the various industries as the most advanced micro technology. IPC however developed and works on the level of Pico Technology. Hardly anyone knows that this technology exists and in fact there are only a select few people who have even heard the term PICO Technology. IPC named the application of this technology EUPHORIA TECHNOLOGY™.

Pico refers to the manipulation of matter on the scale of a trillionths of a meter 10^{-12} . This is 1000 times smaller than a nanometer 10^{-9} and is much more advanced than traditional Nano Technology. Individual atoms range in size from 10 to 100's of picometers. A proton is of an equally charged state to that of an electron. The aligning of positively charged protons also aligns equally the negatively charged electrons. The natural properties of all existing matter are enhanced through this realignment process.

Protons and Electrons move chaotically within the atom. The technology developed by IPC changes this chaotic movement into aligned movement - into harmony.

To this point Nano Technology has represented the smallest particles that one can work with. Nano = 1 billionth of a meter 10^{-9} .

Incredibly, IPC works with Pico Technology. This is 1000 times smaller than Nano Technology!!! Pico = 1 trillionth of a meter 10^{-12}

This is QUANTUM PHYSICS at its finest.

Quantum Physics knows no time or space.
